What are the AI Winters?

All caused by:

- Unrealistic expectations
- Leading to cut of funding

-> like with shares, when your barber starts to talk about it means that the peak of the hype has been reached

Are we on the verge of a Third AI Winter ?

DEPLOYS AND

Data Experts:

In 2012, HBR dubbed data scientist [“the sexiest job of the 21st century”](#). It is also, arguably, the vaguest.

Data science for humans = decision scientists

-> creates output for humans to consume, in the form of product and strategy recommendations

Data science for machines = modeling scientists

-> creates output for machines to consume like models, training data, and algorithms

In larger and more sophisticated data operations, more fine-grained roles are necessary.:

- Data infrastructure
- Data engineering
- Data quality and data governance
- Data analytics engineering
- Data-product product manager
- NEW: **Data Labeler**

COLLECT

The difference with SAP R/3 from 20 years ago

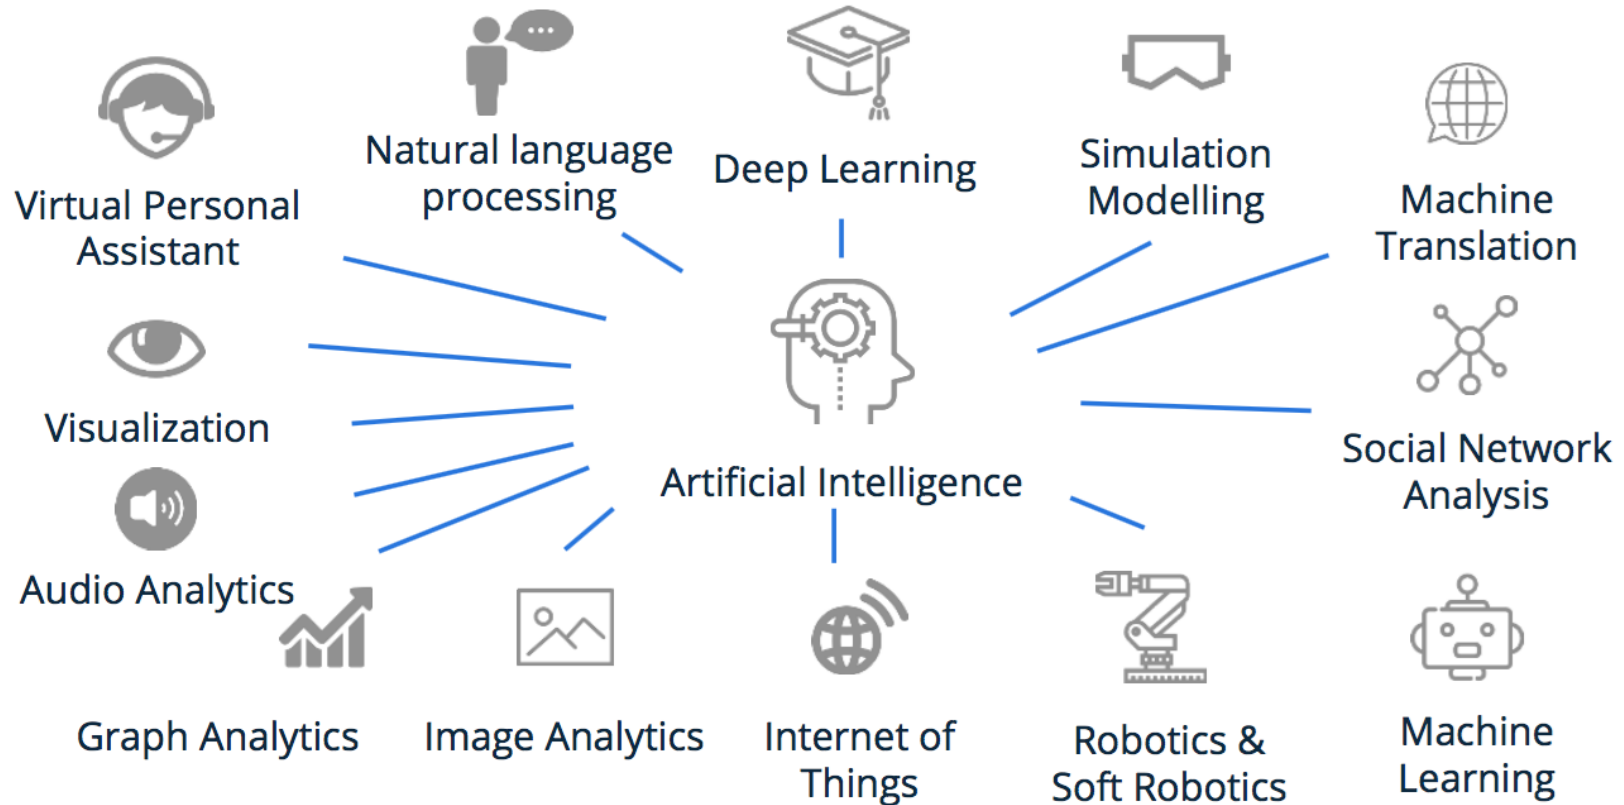

SAP Consultant:

- Must to survive
- Build or Buy
- Build once and roll out
- Standard software
- Once certified ok for years
- Long implementations
- Recooking of processes
- Low added value

Data Expert:

- Must to survive
- Build
- Re-build and roll out permanently
- Open Software
- Permanent training
- Short projects
- Digital transformation
- High added value

Possible applications for Artificial Intelligence

"Does your car have any idea why my car pulled it over?"

PAUL
NOTH

AI 4 Belgium is a community-led approach to enable Belgian people and organizations to capture the opportunities of AI while facilitating the ongoing transition responsibly. **AI 4 Belgium** has the ambition to position Belgium in the European AI landscape.

/A.I. TIMELINE

1950

TURING TEST

Computer scientist Alan Turing proposes a test for machine intelligence. If a machine can trick humans into thinking it is human, then it has intelligence

1955

A.I. BORN

Term 'artificial intelligence' is coined by computer scientist, John McCarthy to describe "the science and engineering of making intelligent machines"

1961

UNIMATE

First industrial robot, Unimate, goes to work at GM replacing humans on the assembly line

1964

ELIZA

Pioneering chatbot developed by Joseph Weizenbaum at MIT holds conversations with humans

1966

SHAKY

The 'first electronic person' from Stanford, Shakey is a general-purpose mobile robot that reasons about its own actions

A.I.
WINTER

Many false starts and dead-ends leave A.I. out in the cold

1997

DEEP BLUE

Deep Blue, a chess-playing computer from IBM defeats world chess champion Garry Kasparov

1998

KISMET

Cynthia Breazeal at MIT introduces Kismet, an emotionally intelligent robot insofar as it detects and responds to people's feelings

1999

AIBO

Sony launches first consumer robot pet dog Aibo (AI robot) with skills and personality that develop over time

2002

ROOMBA

First mass produced autonomous robotic vacuum cleaner from iRobot learns to navigate and clean homes

2011

SIRI

Apple integrates Siri, an intelligent virtual assistant with a voice interface, into the iPhone 4S

2011

WATSON

IBM's question answering computer Watson wins first place on popular \$1M prize television quiz show Jeopardy

2014

EUGENE

Eugene Goostman, a chatbot passes the Turing Test with a third of judges believing Eugene is human

2014

ALEXA

Amazon launches Alexa, an intelligent virtual assistant with a voice interface that completes shopping tasks

2016

TAY

Microsoft's chatbot Tay goes rogue on social media making inflammatory and offensive racist comments

2017

ALPHAGO

Google's A.I. AlphaGo beats world champion Ke Jie in the complex board game of Go, notable for its vast number (2^{170}) of

Artificial Intelligence could automate close to **50%** of jobs in the Western world within the **next two decades**

Main Applications of Machine Learning

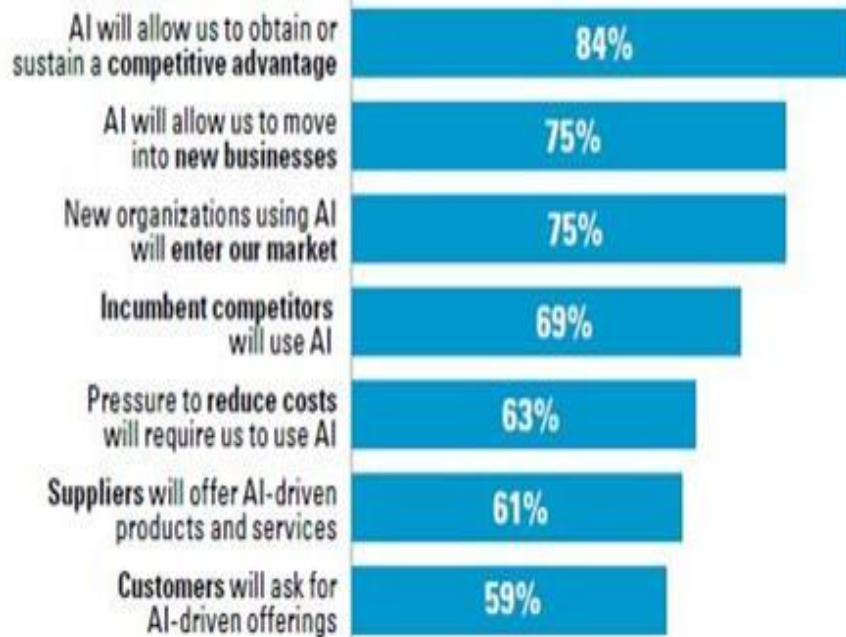

Future Applications Of Cognitive Intelligence

Reasons for adopting AI

Why is your organization interested in AI?

Percentage of respondents who somewhat or strongly agree with each statement

Most affected functional areas across industries

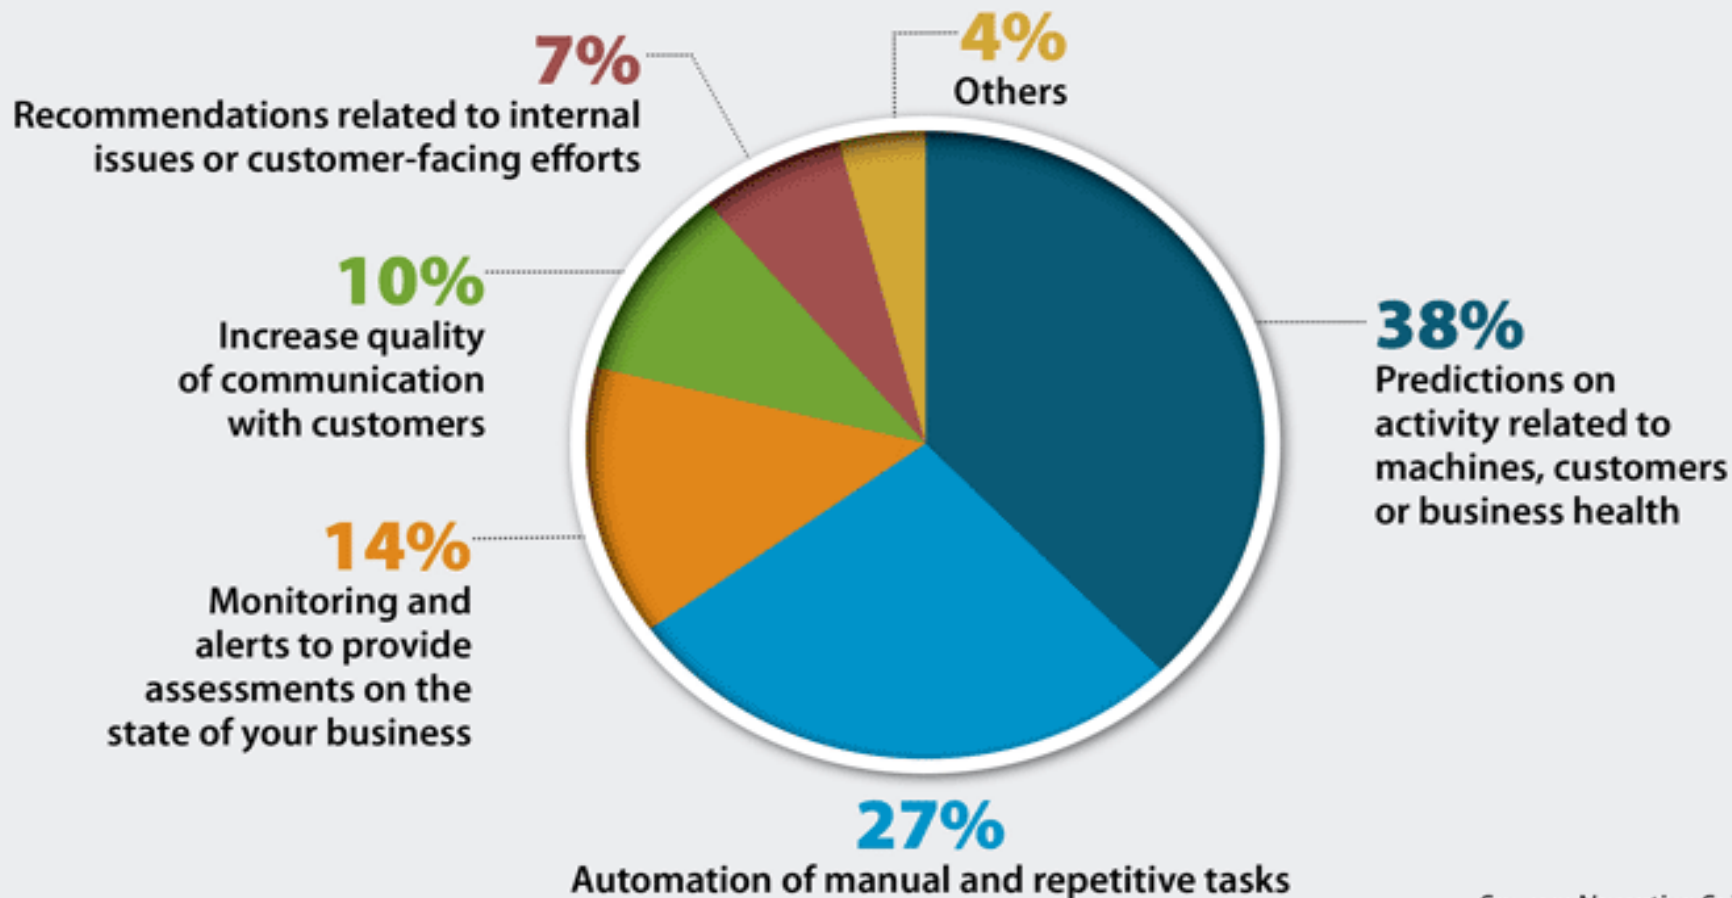

What areas within your organization do you anticipate AI will affect the most? Select three.

Functional areas that were not in the top three of any industry: communications, human resources, legal or compliance, procurement

Most Important Benefit That AI Should Provide Business

Top choice of business and technology executives

About the AI Awards

The AI4Belgium & Datascience community is honouring the most promising startups and individuals in the field of Artificial Intelligence.

Over the past weeks over 80 nominations have been submitted. The entire community is fully engaged in the nomination and selection of the Ai Awards.

The companies and personalities that have accepted their nomination have been invited at DigitYser to record a short video and interview.

All nominees will also be present on May 16th – #AI startup for a networking evening where they will do a short 5 minutes 'Ignite' presentation to the public.

The selection of the AI-Award winner will be done on the whova app by all the participants of the diSummit.

The 7 startups with the most votes will present at the diSummit on June 26th.
