# CIOFEST

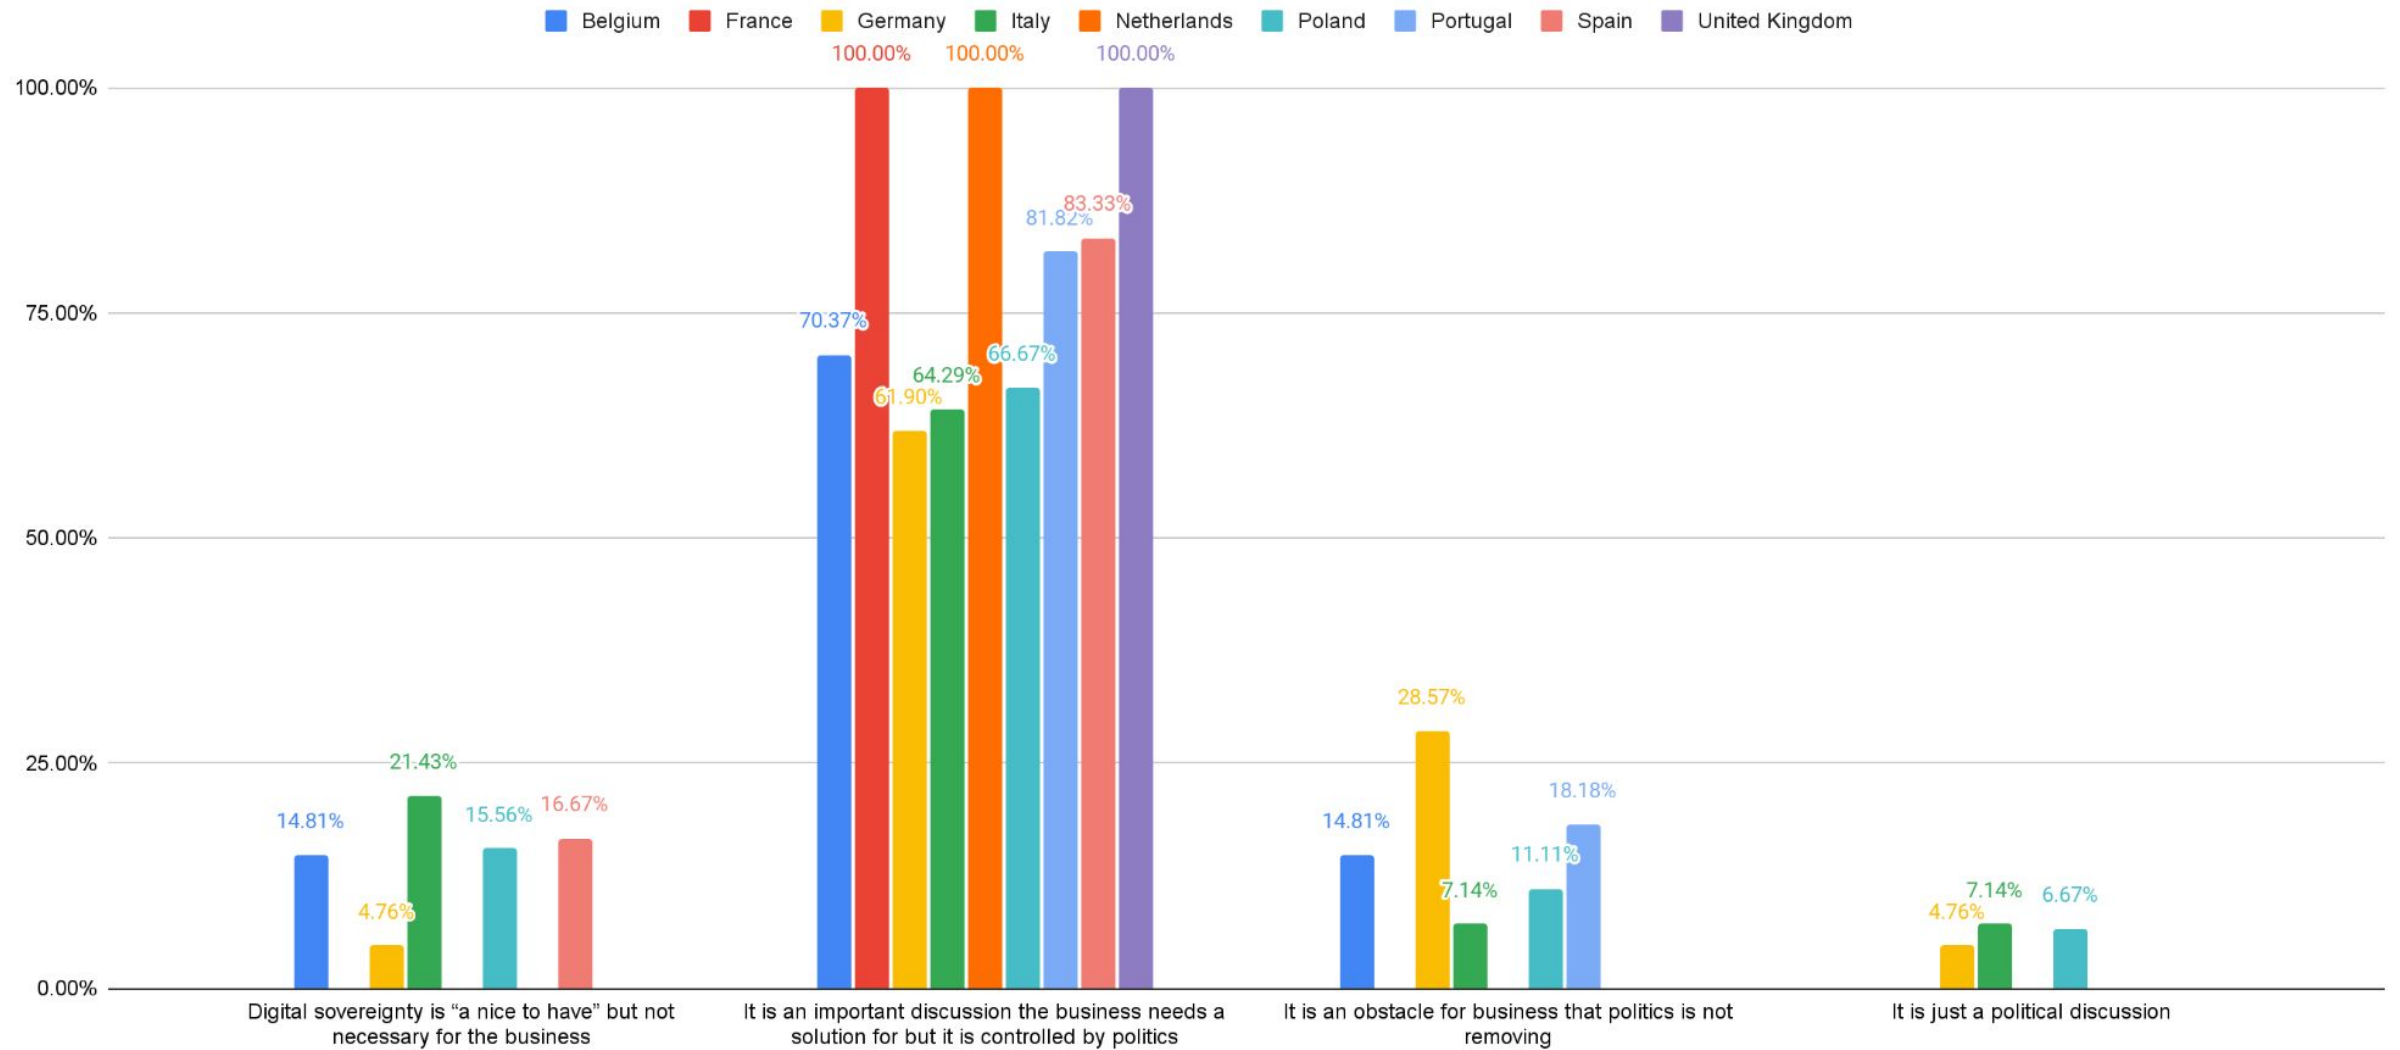

## THE QUEST FOR DIGITAL SOVEREIGNTY

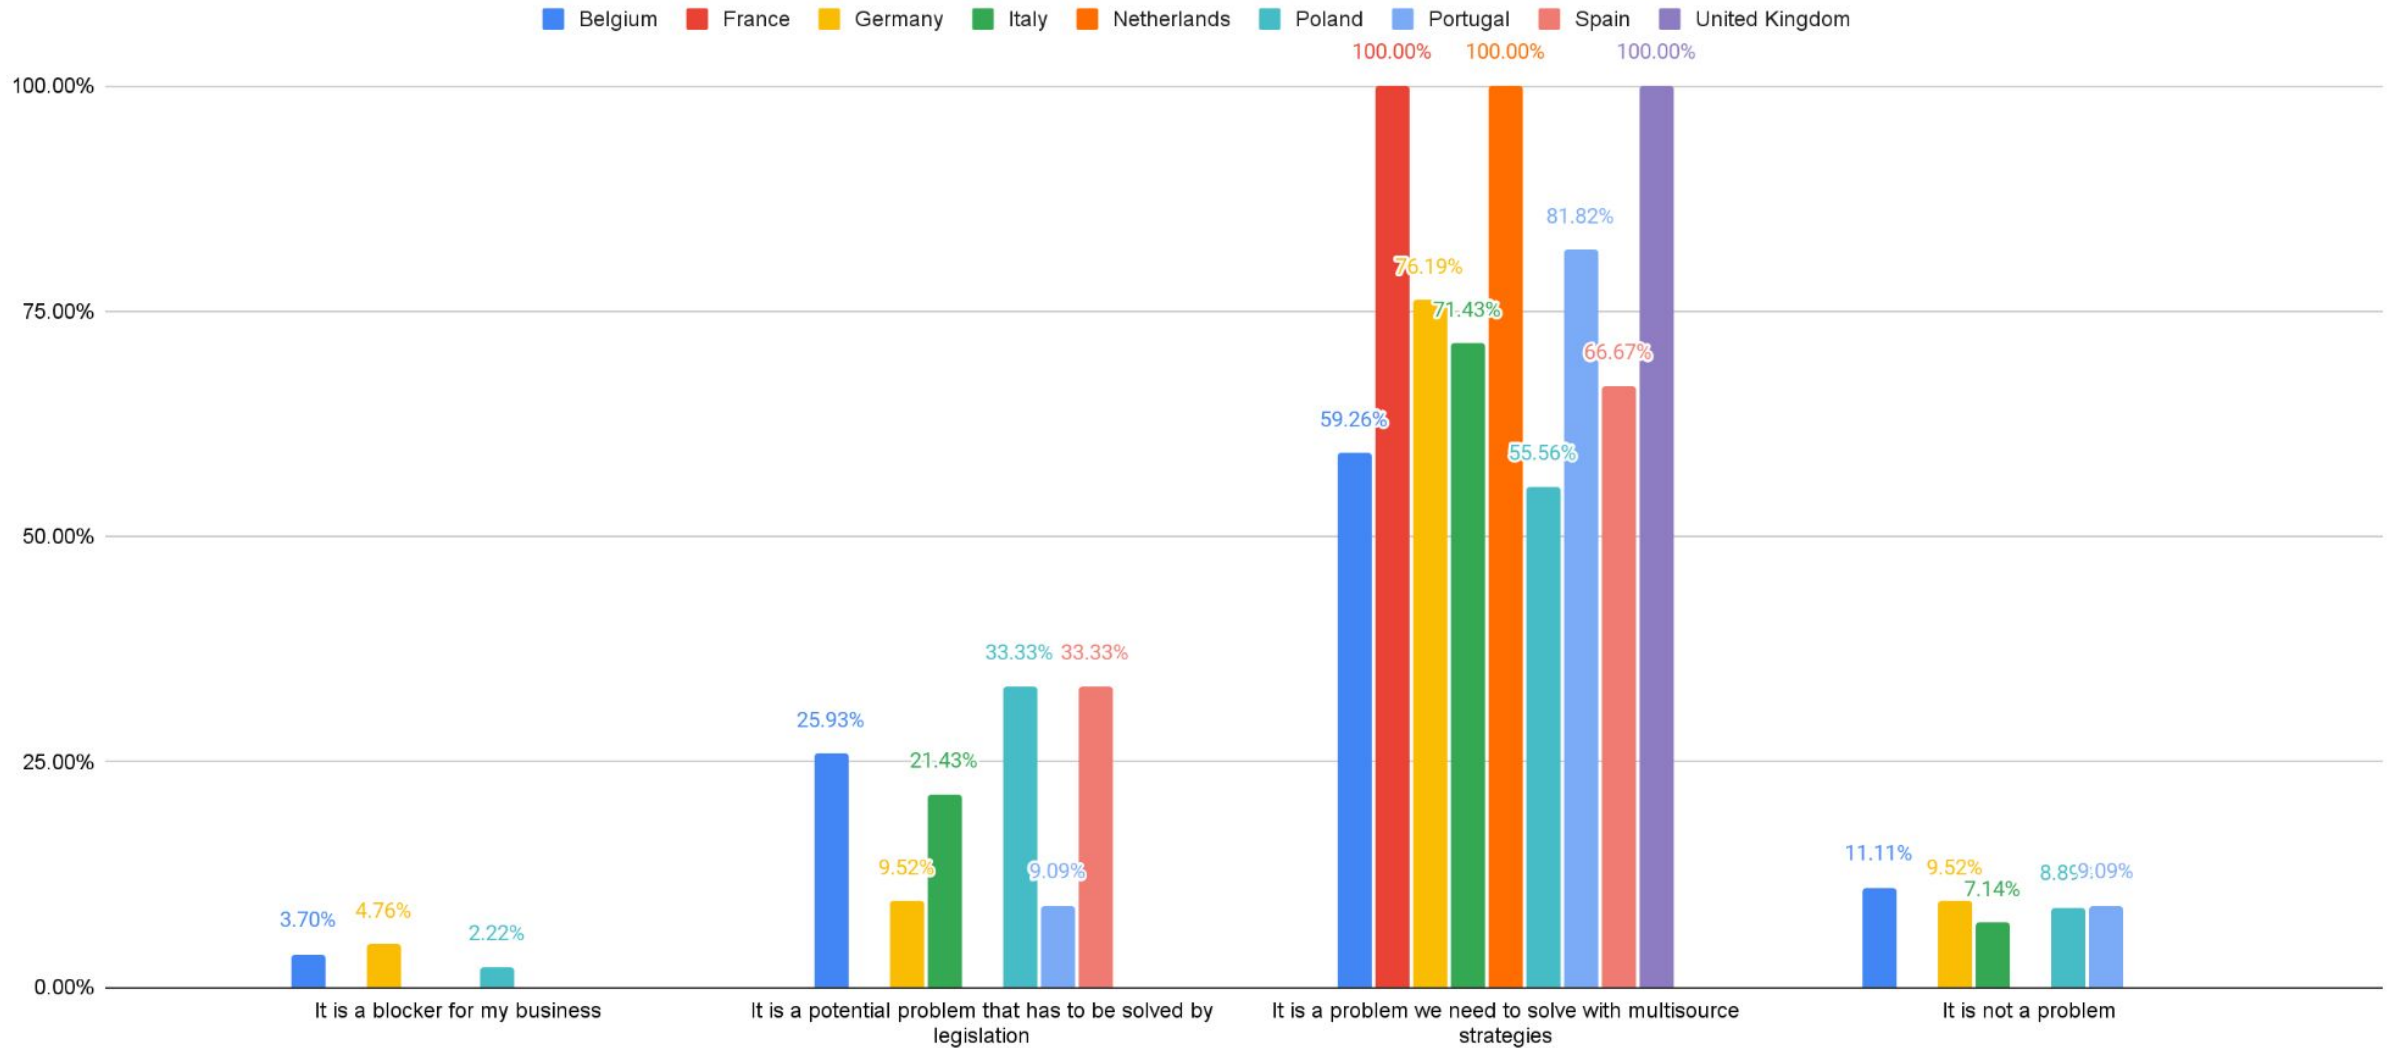

RESULT OF THE POLL

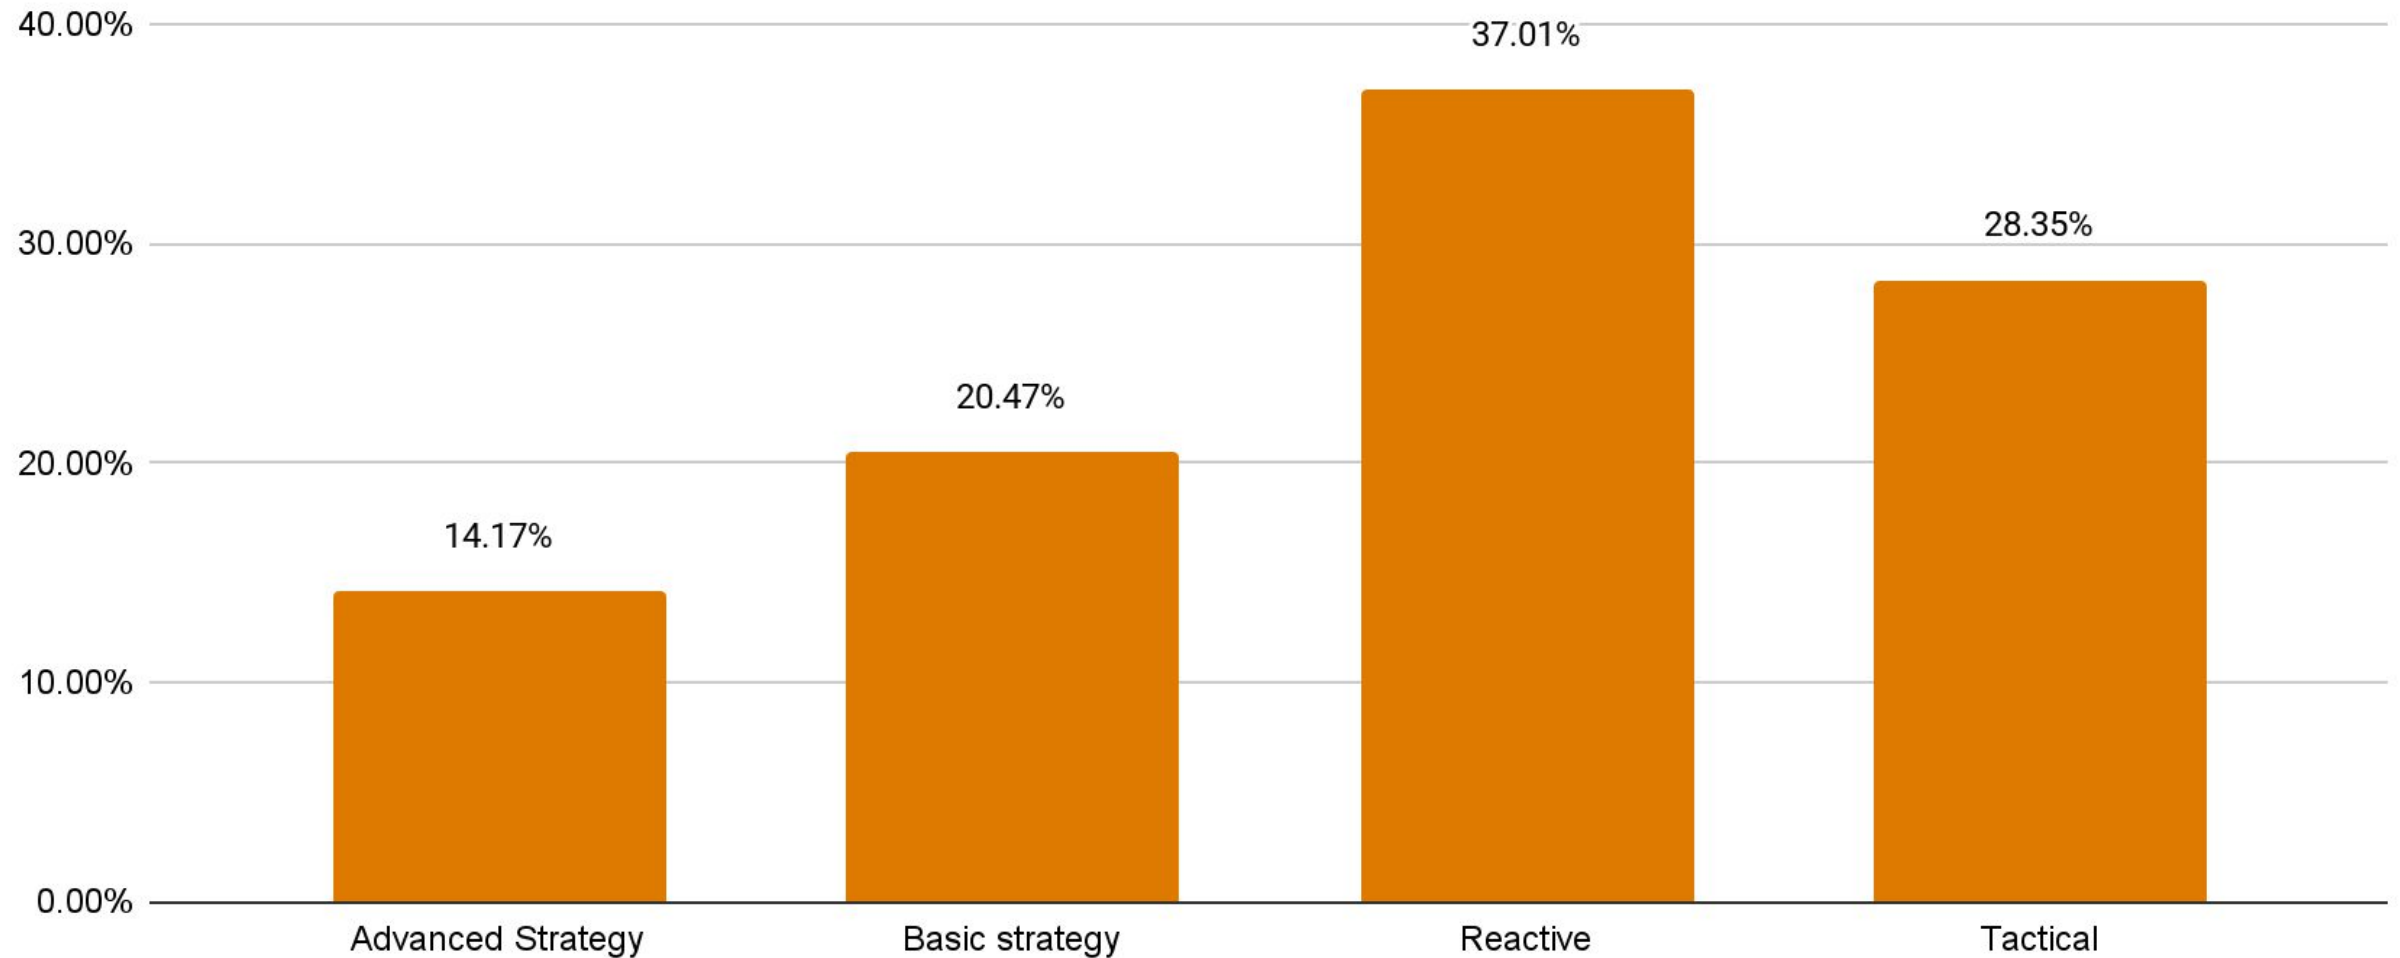

## Do you see Digital Sovereignty as a need for business organisations or mainly as a political issue?

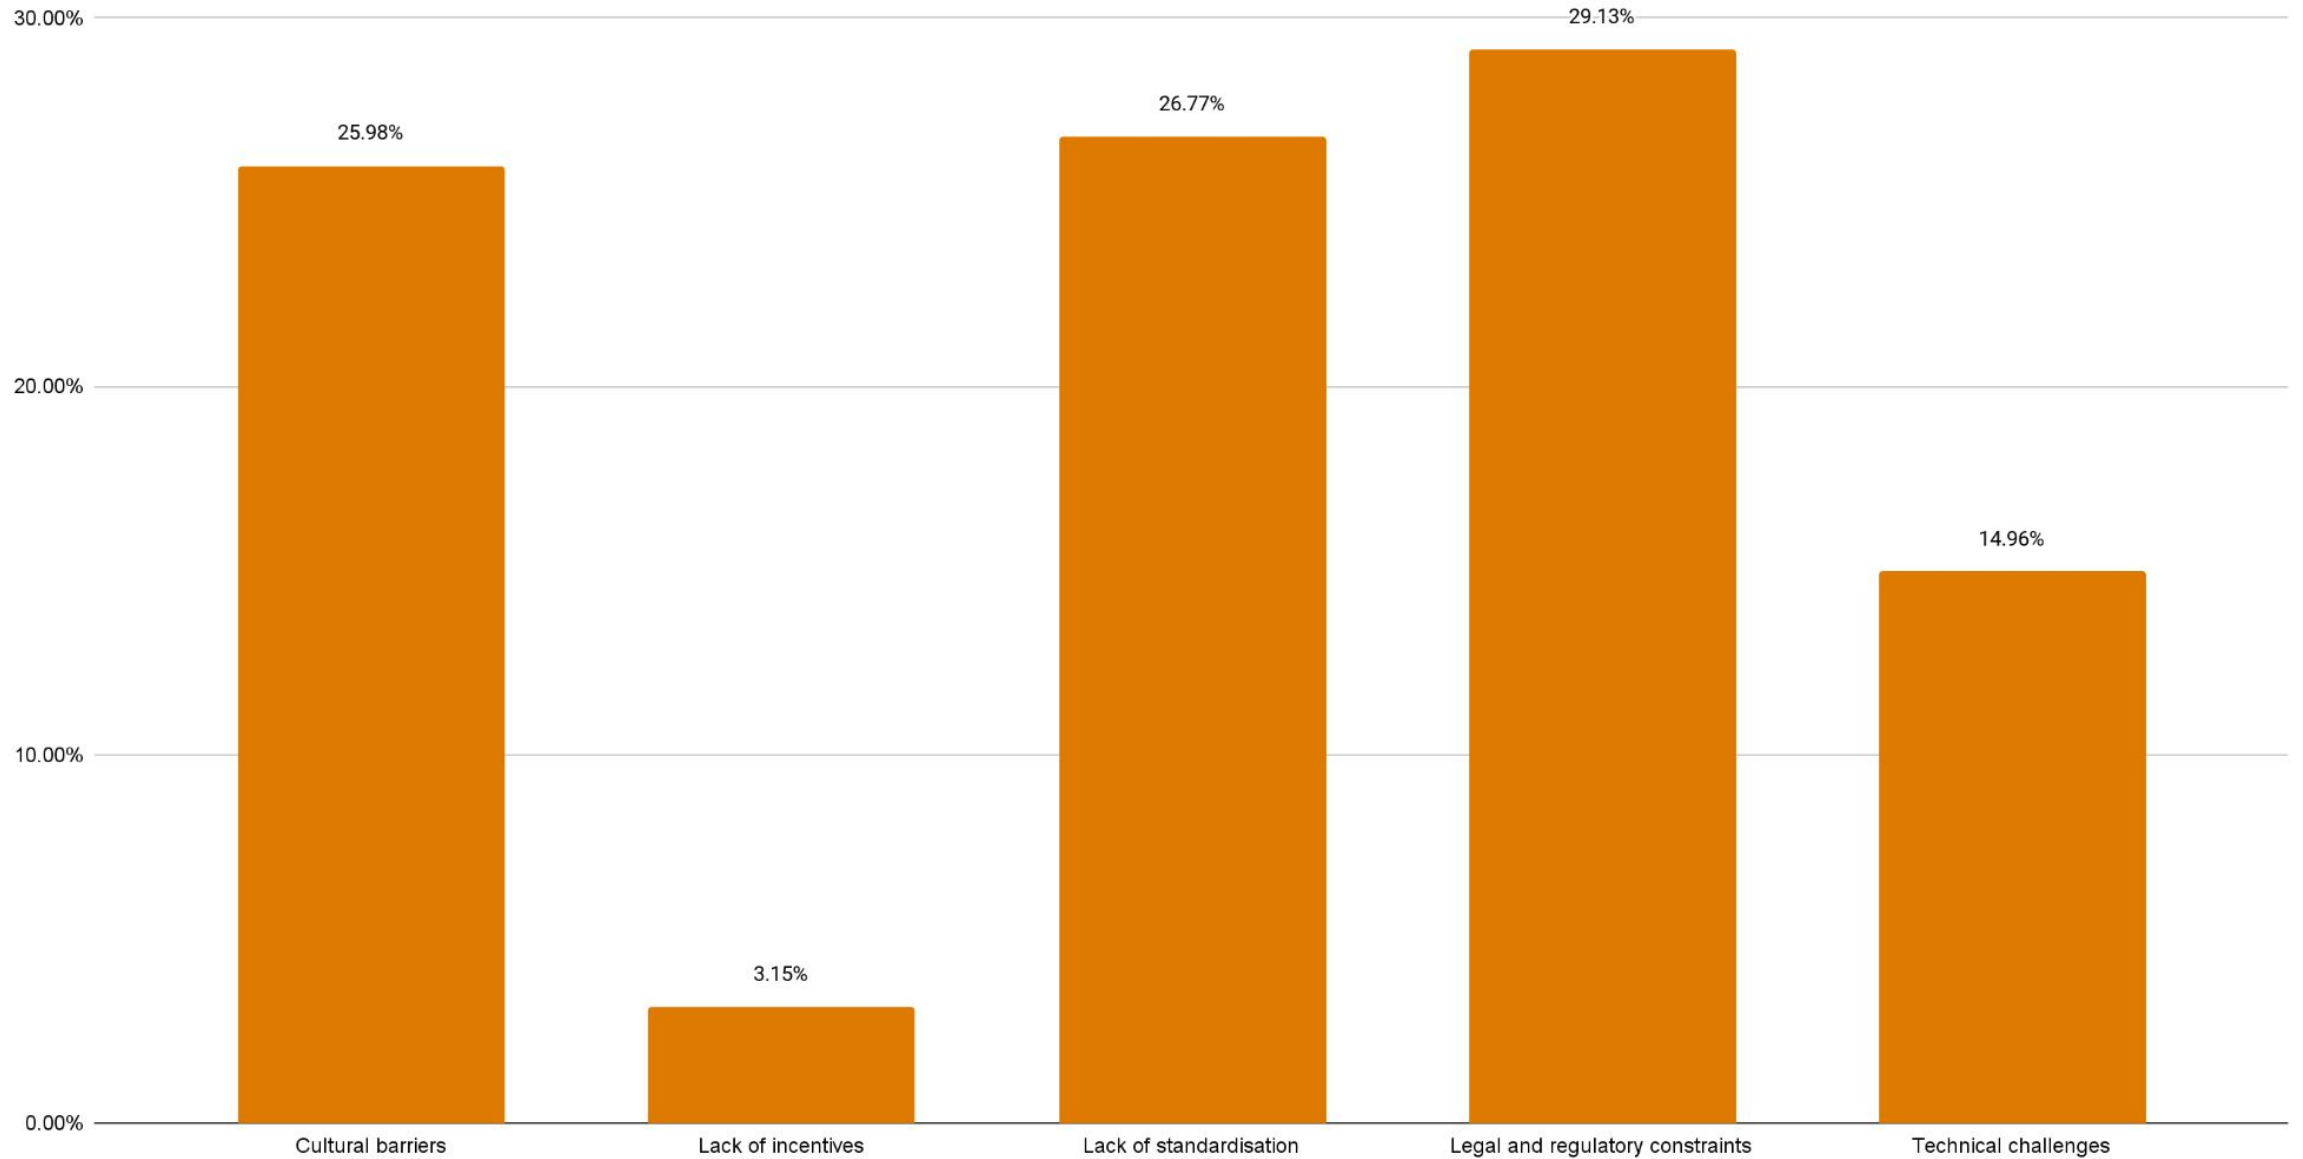

## How do you consider the dependency on a few dominant players in technology?

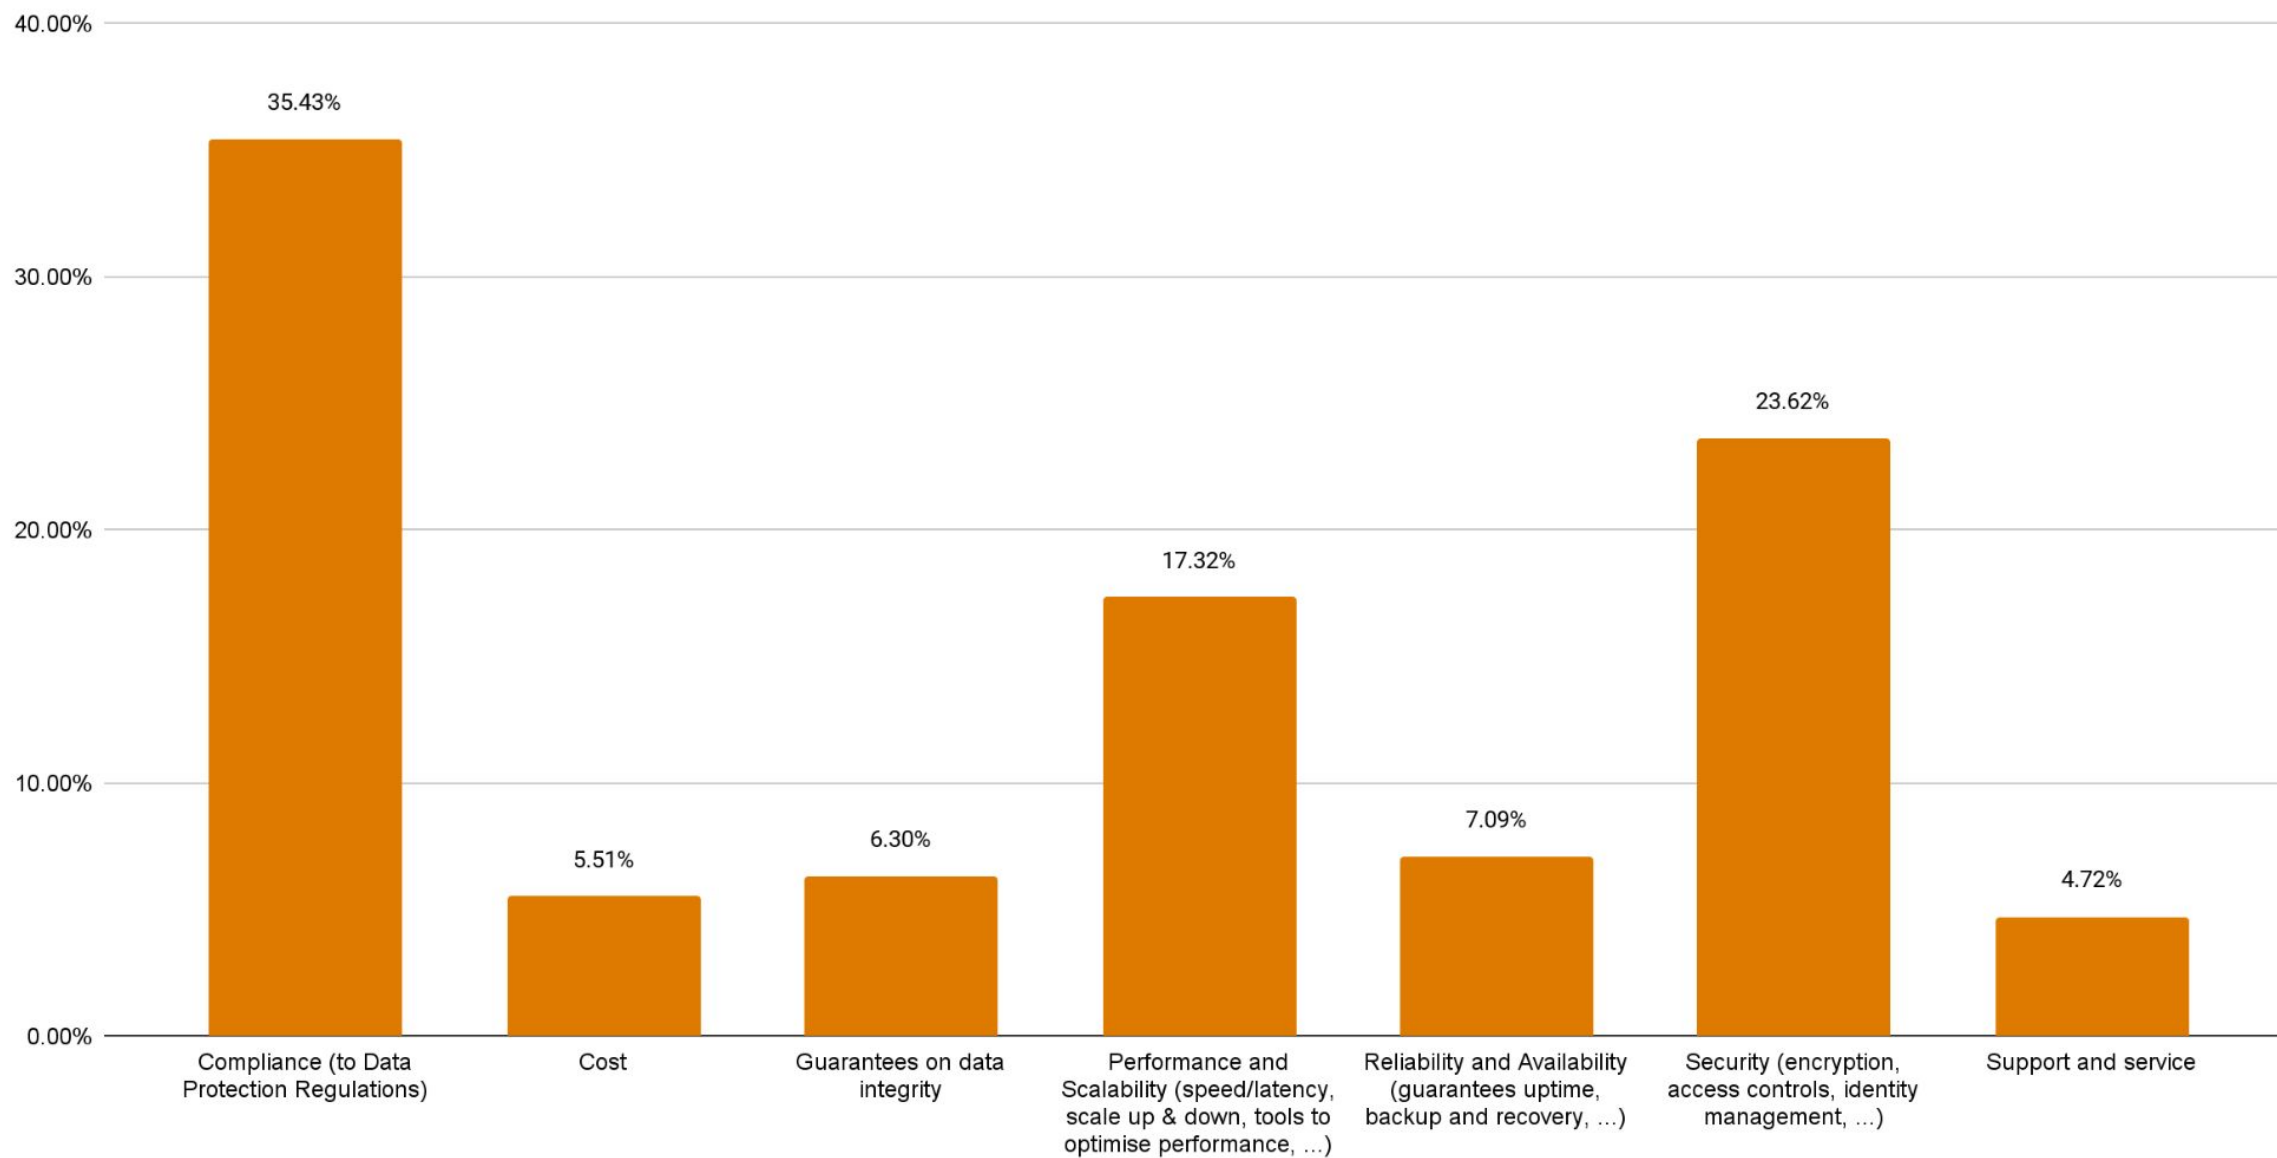

**To what extent is digital sovereignty on your organisation's radar? Please indicate which statement best describes your organisation's level of maturity in this context.**

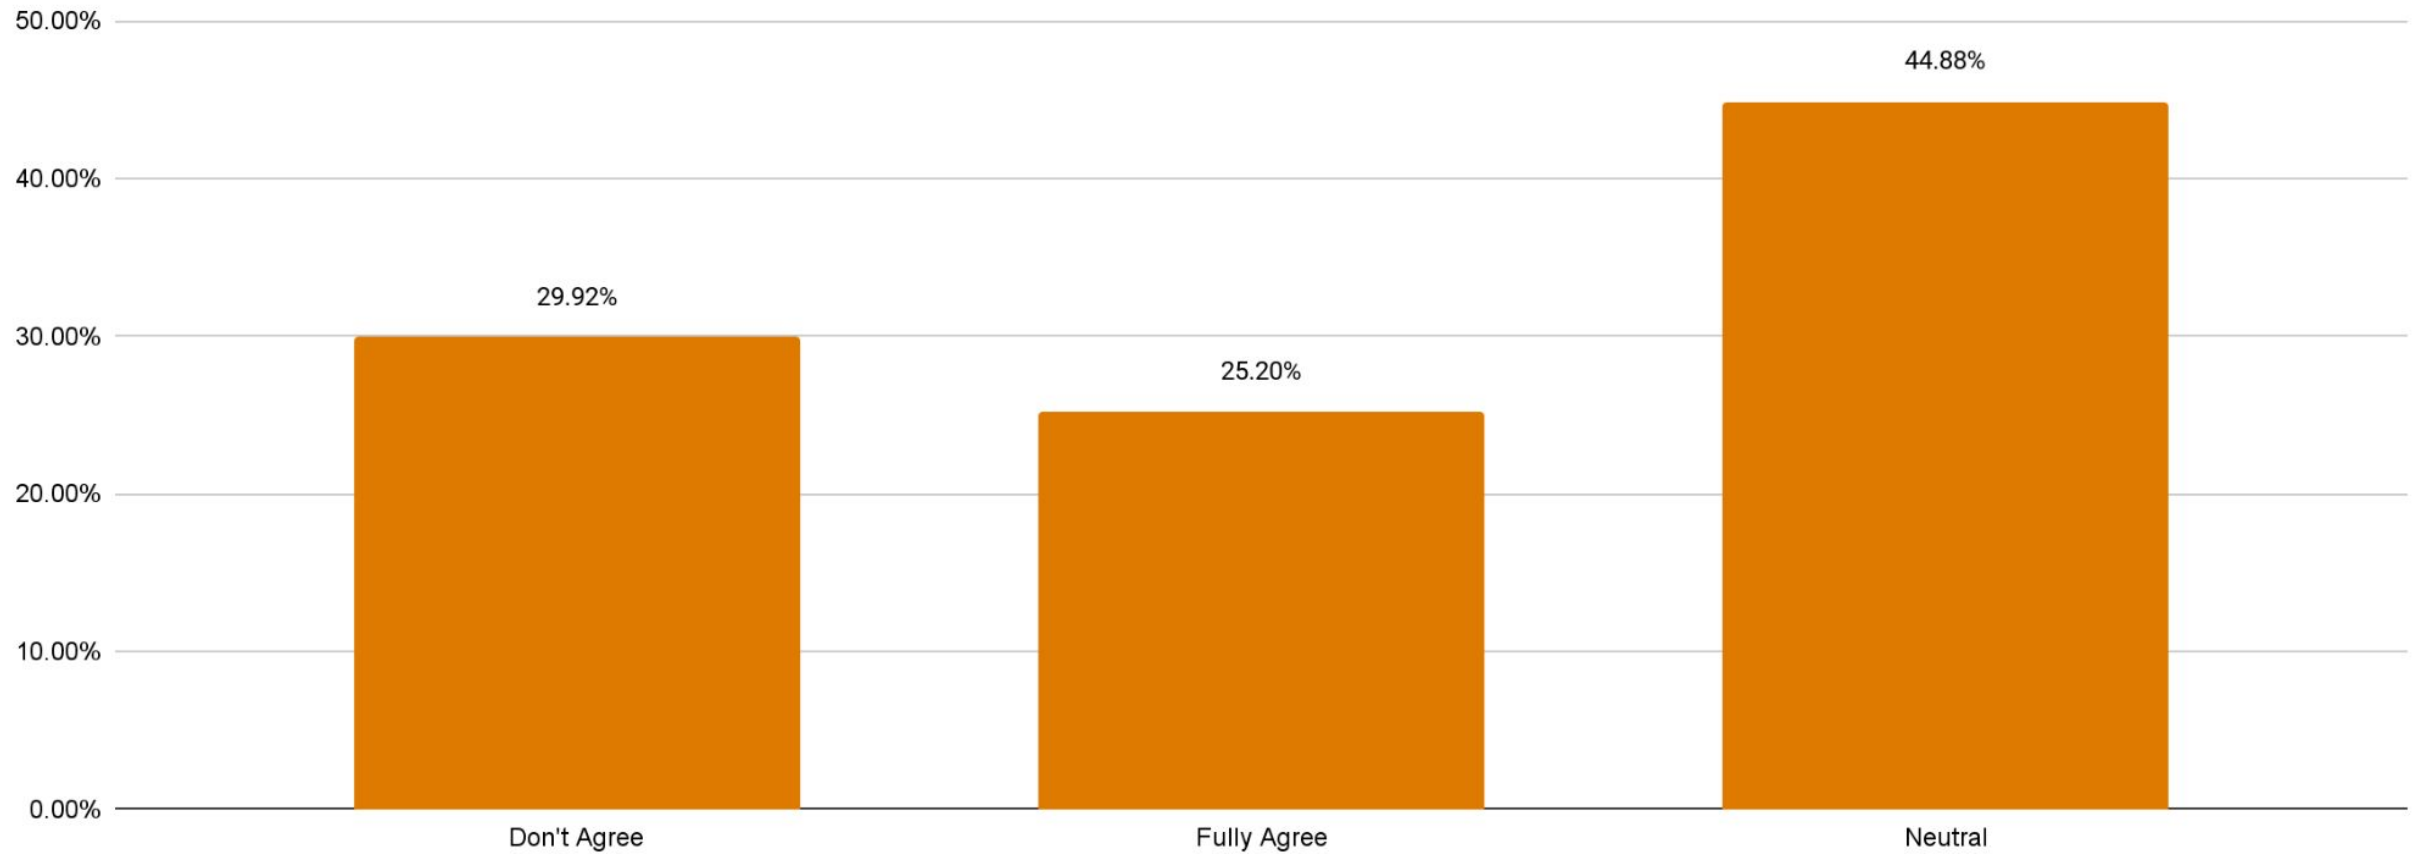

## What do you perceive as the main hurdle for data sharing today?

## What is the most important requirement for moving to (or using) a European cloud?

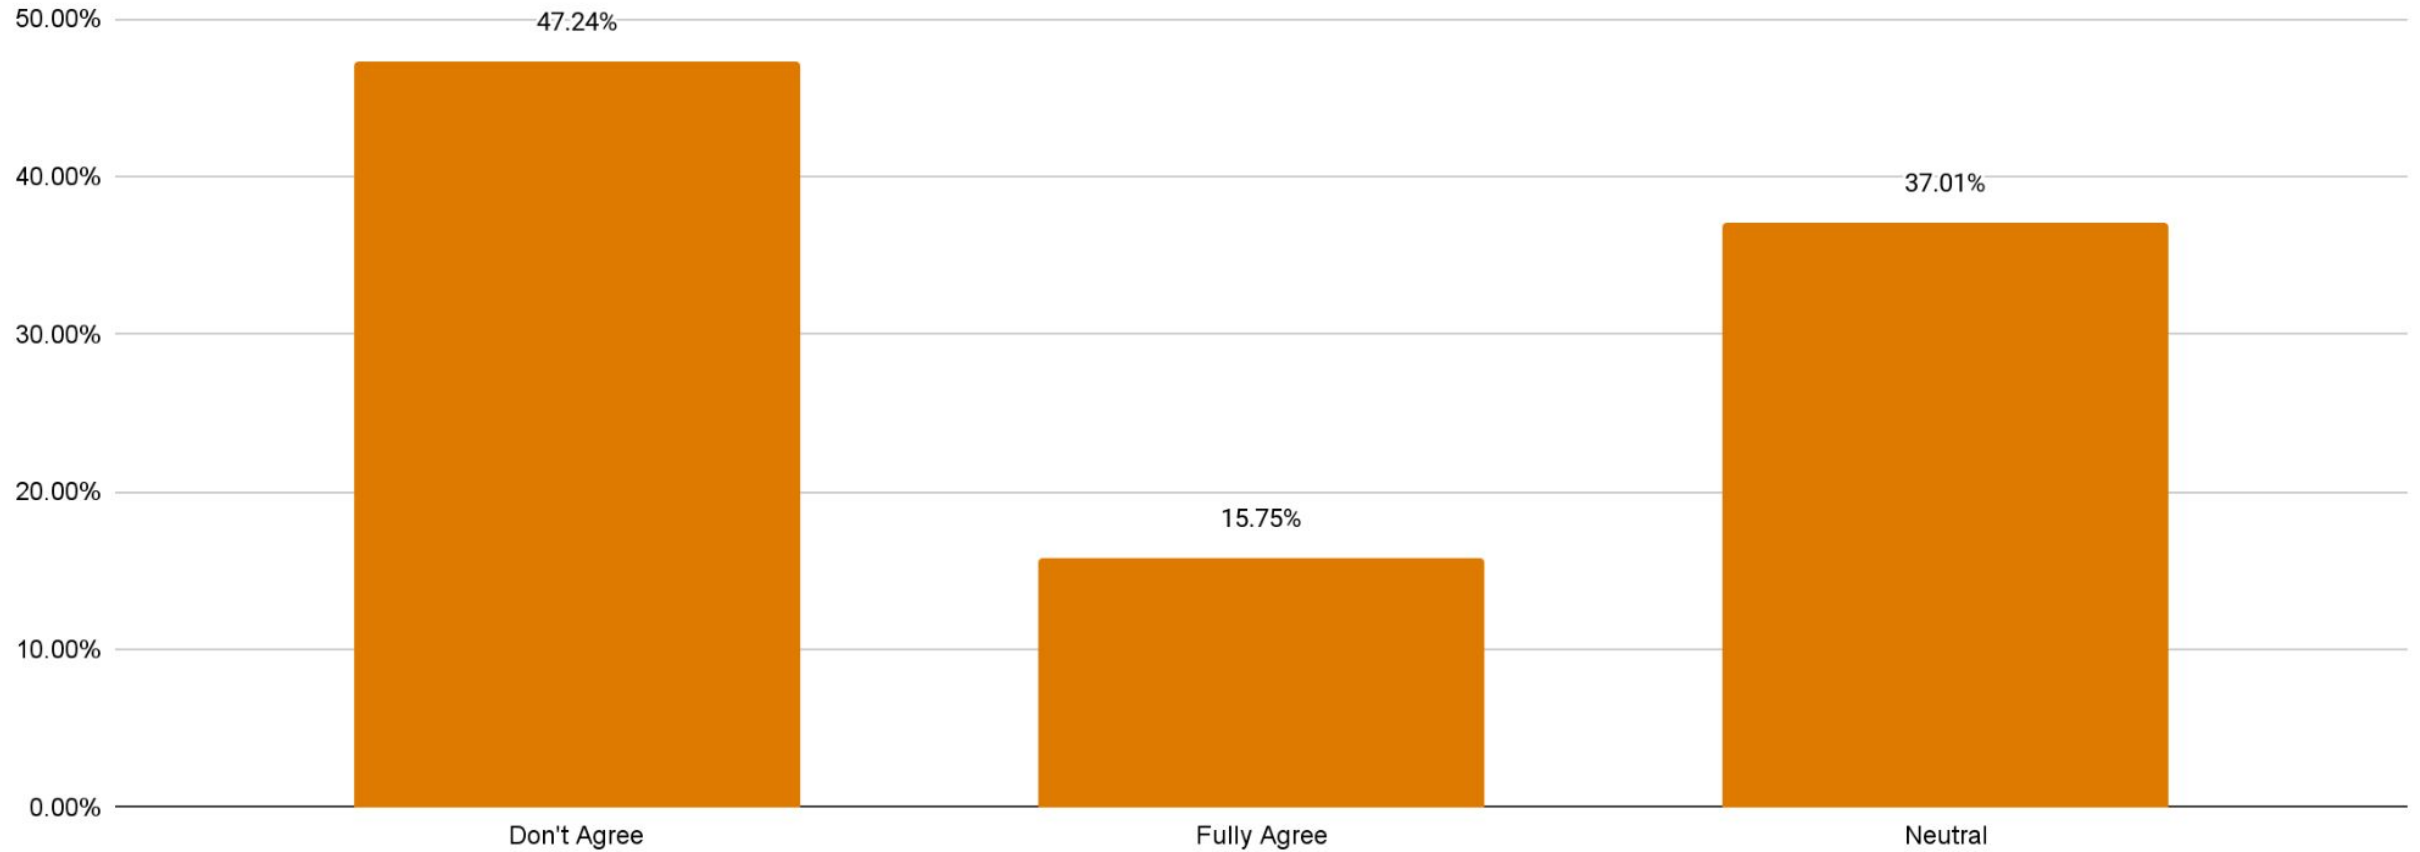

## Market concentration on the cloud market poses a threat to the digital sovereignty of my organisation.

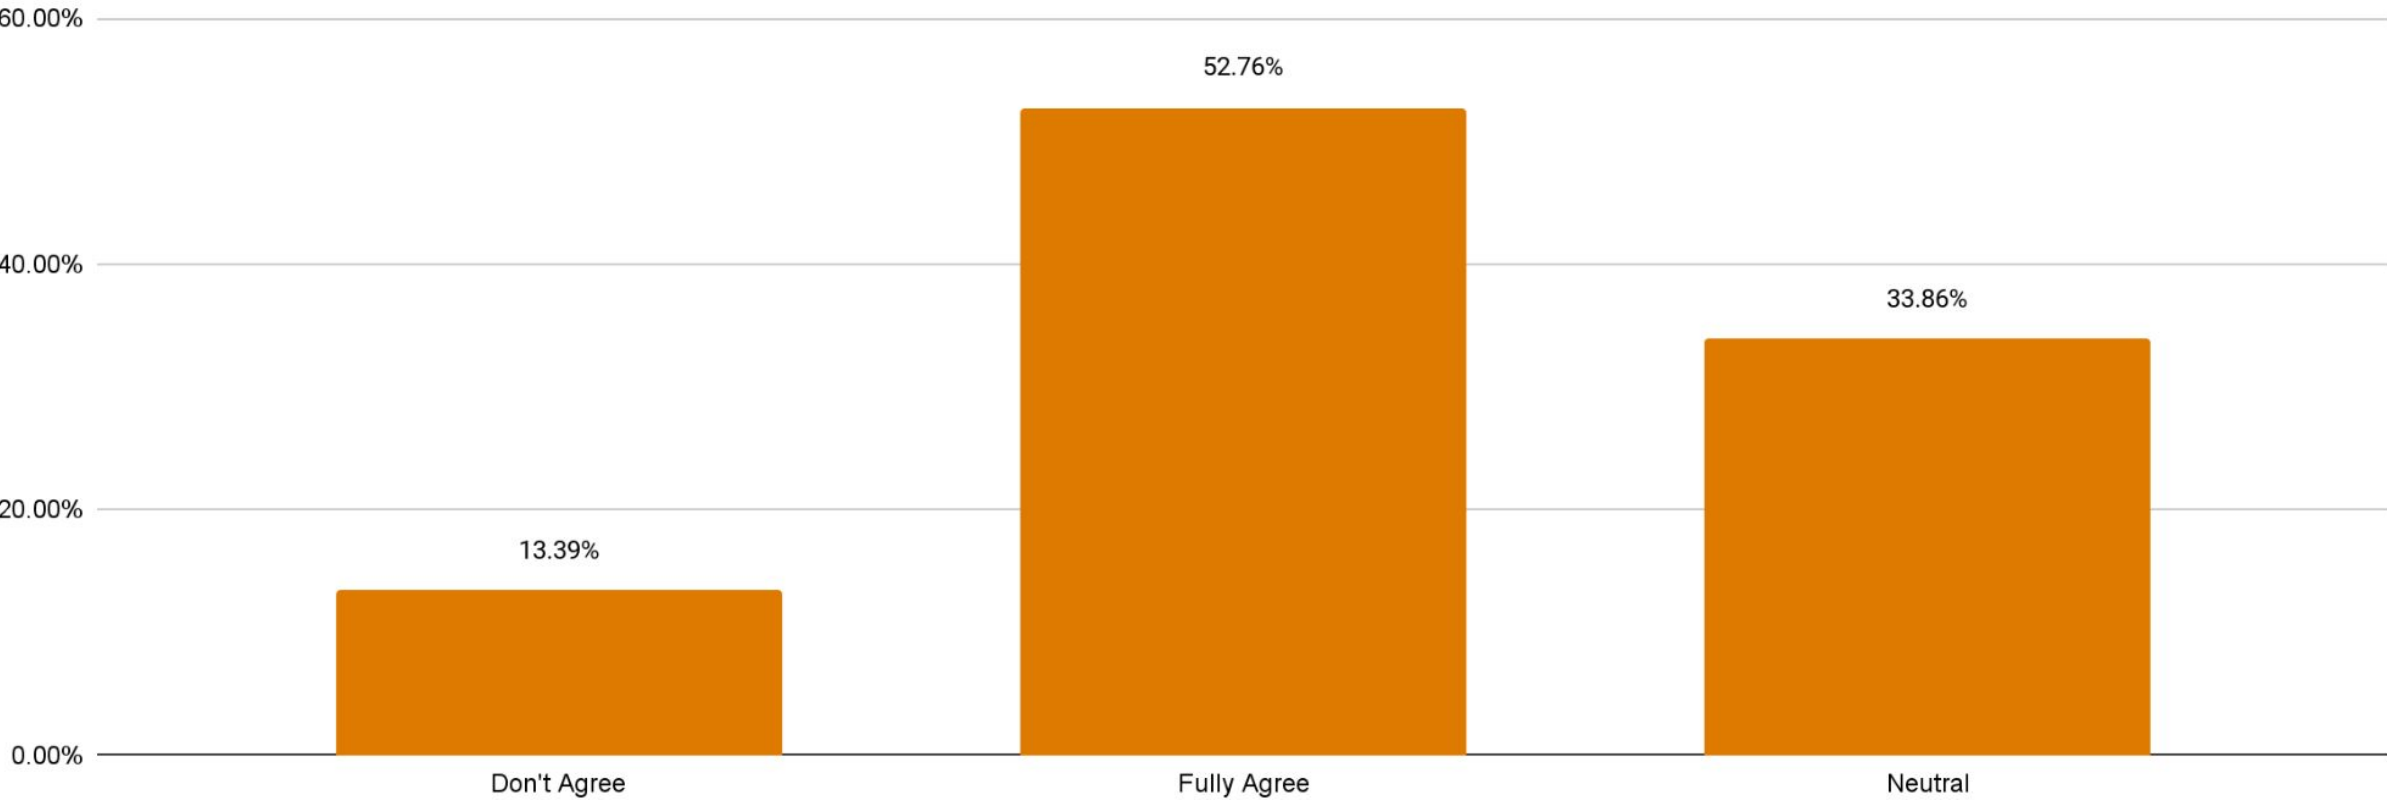

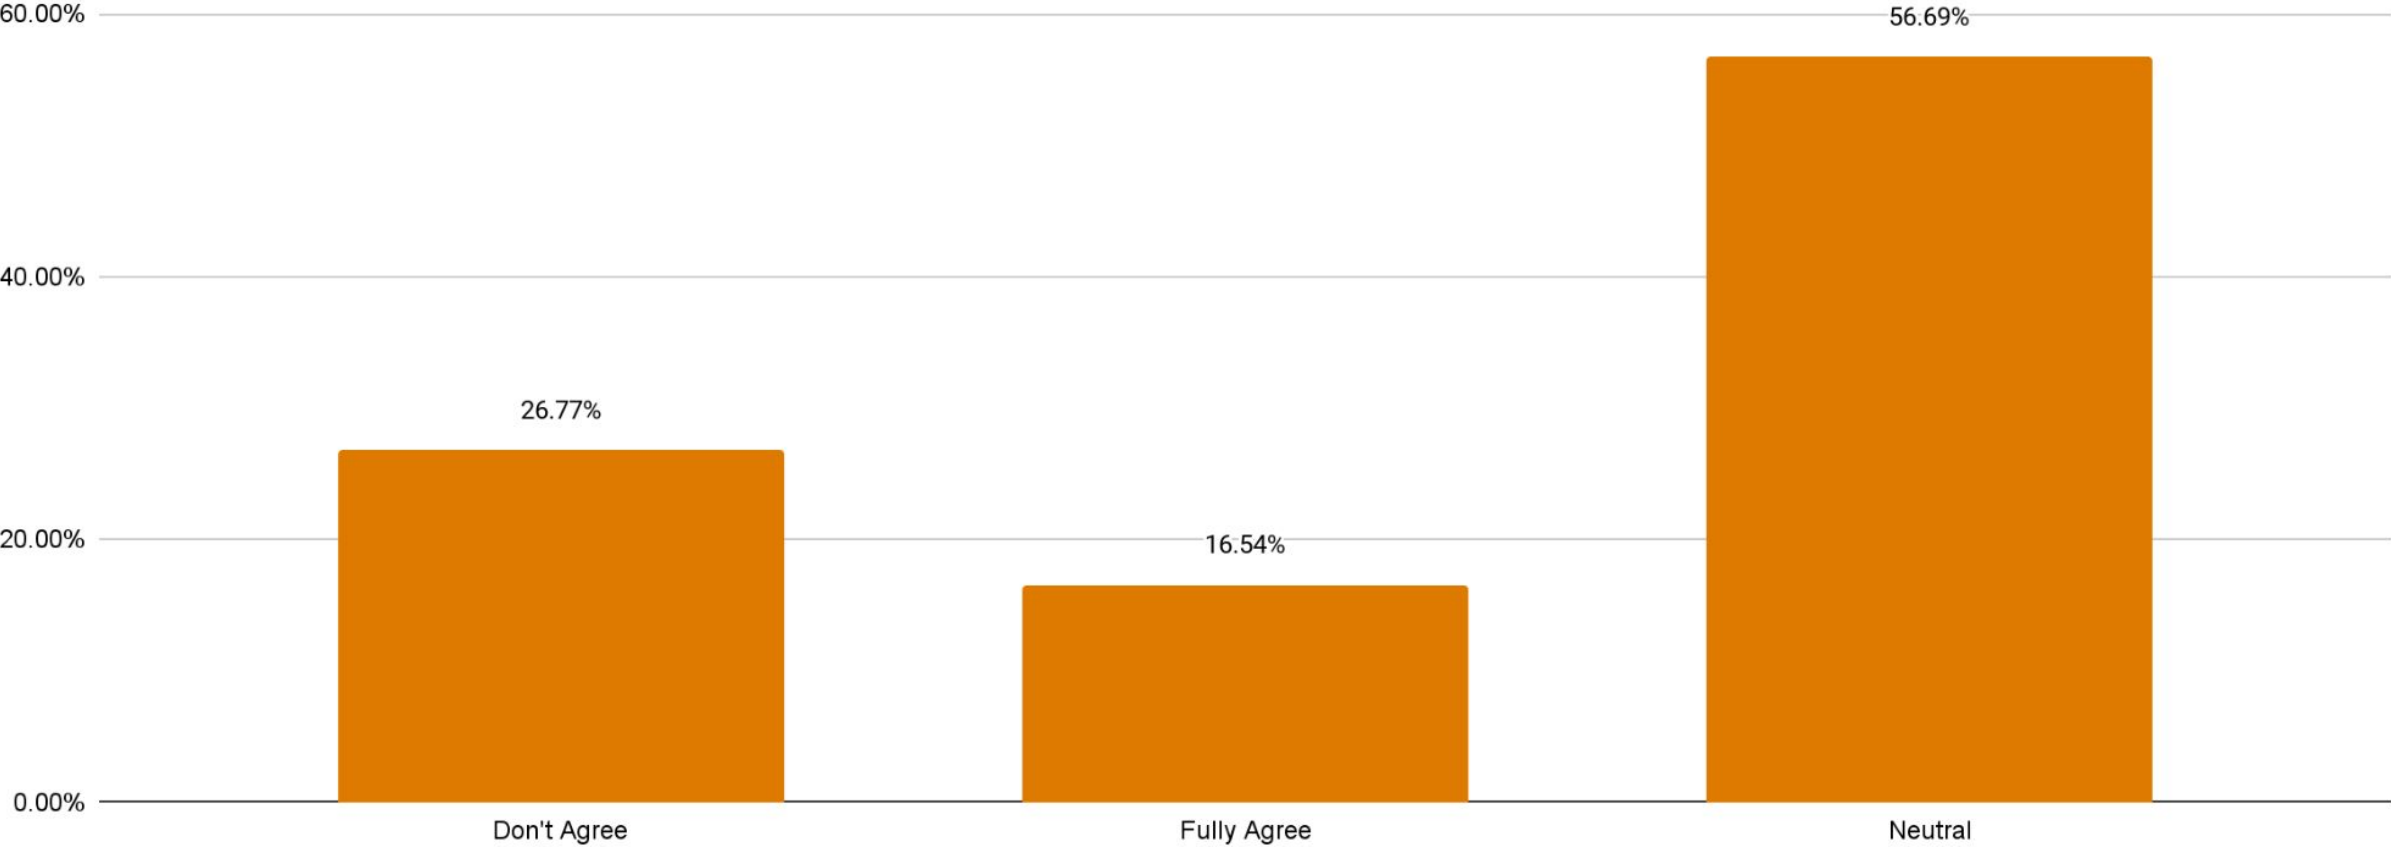

**European (federated) cloud offerings are currently a viable alternative for my organisation.**

Europe should focus on strengthening its existing partnerships with global technology companies, rather than trying to compete with them.

New European legislation makes it easier to share data and use cloud technologies for my organisation

THANK YOU
